Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/046,496

Applicant(s)

NACHENBERG ET AL.

Examiner

Jeffery Williams

Art Unit

2137

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 01 September 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-17 and 20-33 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-17 and 20-33 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 29 October 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

This action is in response to the communication filed on 9/1/06.

All objections and rejections not set forth below have been withdrawn.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

**Claims 1 – 10 and 12 – 33 is rejected under 35 U.S.C. 102(e) as being
anticipated by Bates et al., U.S. Patent 6,721,721 B1.**

Regarding claim 1, Bates et al. discloses:

entering a first computer virus status mode in response to a first computer virus outbreak report indicating a virus attack threat to a computer network (Bates et al., col. 1, lines 13-52). Bates et al. reports the outbreak of new and more sophisticated viruses, and in response, the system of Bates et al. is employed for the purpose of protecting against these outbreaks.

1 *computing a first computer virus alert time corresponding to entry into the first*
2 *computer virus status mode* (Bates et al., fig. 7, elem. 214; col. 7, lines 20-35). Herein,
3 Bates et al. discloses a method for accessing computer content on a local machine or
4 on a network. Content is filtered based upon a generated virus alert time, a rule derived
5 from relative time parameters (criterion) entered (via computer means, "computing") by
6 a user in a virus status mode. The relative time parameters (i.e. "virus found in last 7
7 days", "not checked in last 14 days") are processed ("computing") into a rule, which is
8 then utilized by the system to compare with the timestamps of content and make
9 determinations of trustworthiness (Bates et al., col. 11, lines 12-24; col. 13, lines 22-34;
10 col. 17, lines 35-49; col. 18, lines 22-30).

11 *comparing a time stamp of a computer content with the first computer virus alert*
12 *time* (Bates et al., col. 9, line 65 – col. 10, line 3; col. 11, lines 12-24; col. 12, lines 59-
13 62);

14 *and determining the executability of the computer content in response to the*
15 *result of the comparing step* (Bates et al., col. 9, line 56 – col. 10, line 8; col. 11, lines
16 12-24). Bates et al. discloses that in response to a comparison, a determination of
17 computer content executability is performed.

18
19
20 Regarding claim 2, Bates et al. discloses:

1 *receiving a first access control time based on the first virus outbreak report*
2 (Bates et al., fig. 7, elem. 214). The system of Bates et al. takes human input and
3 "automatically" generates computer readable parameters.

4 *and converting the first access control time into the first virus alert time* (Bates et
5 al., fig. 7, elem. 214; col. 12, lines 59-62). A "prior point in time" ("virus alert time") is
6 derived from the period of time specified by element 214 ("access control time") and is
7 compared to the timestamp of the file.

8
9 .Regarding claim 3, Bates et al. discloses:

10 *wherein the first access control time is a relative time stamp* (Bates et al., fig. 7,
11 elem. 214; col. 12, lines 59-62). A "prior point in time" ("virus alert time") is derived from
12 the period of time specified by element 214 ("access control time") and is relative in
13 time.

14
15 Regarding claim 4, Bates et al. discloses:

16 *wherein the first access control time is a pre-determined time period for access*
17 *control under the first computer virus status mode* (Bates et al., fig. 7, elem. 214). The
18 access control time is pre-determined by the user.

19
20 Regarding claim 5, Bates et al., discloses:

21 *determining the presence of a value representing the computer content in a*
22 *memory table of executable computer content* (Bates et al., col. 7, lines 12-34).

1

2 Regarding claim 6, Bates et al., discloses:

3 *wherein the computer content is not executed when the value representing the*
4 *computer content is not present in the memory table of executable computer content*
5 (Bates et al., col. 11, lines 11-24; col. 3, lines 24-27). As disclosed by Bates et al.,
6 content not present in the memory table of executable computer content is flagged as
7 untrustworthy. The invention as disclosed by Bates et al. is configurable to eliminate
8 untrustworthy computer content from the list of accessible content, thus not providing
9 access to the content for execution.

10

11 Regarding claim 7, Bates et al. discloses:

12 *wherein the value is a hash value of the computer content* (Bates et al., col. 12,
13 lines 55-58).

14

15 Regarding claim 8, Bates et al. discloses:

16 *wherein the computer content is executed only when the computer content is*
17 *time stamped prior to the first computer virus alert time* (Bates et al., col. 13, lines 42-
18 59; col. 3, lines 24-27). Computer content that is time stamped prior to the first
19 computer virus alert time is branded as trustworthy. Thus, the content would not be
20 subjected to denial of access for execution.

21

22 Regarding claim 9, Bates et al. discloses:

1 *entering types of computer codes that should be blocked from execution in*
2 *response to the first computer virus outbreak report (Bates et al., col. 9, line 62 – col.*
3 *10, line 28);*

4 *and blocking execution of a computer code that belongs to the entered types of*
5 *computer codes (Bates et al., col. 3, lines 24-27). The invention as disclosed by Bates*
6 *et al. is configurable to eliminate untrustworthy computer content from the list of*
7 *accessible content, thus not providing access to the content for execution.*

8
9 Regarding claim 10, Bates et al. discloses:

10 *generating a second virus alert time in response to a second computer virus*
11 *outbreak report; comparing the time stamp of the computer content with the second*
12 *computer virus alert time; determining the executability of the computer content in*
13 *response to the result of comparing the time stamp of the computer content with the*
14 *second computer virus alert time (Bates et al., col. 3, lines 5 – 15). The above*
15 *limitations of claim 10 are essentially similar to claim 1 with the exception that they are*
16 *directed to a second instance of the method of claim 1. Bates et al. discloses that the*
17 *method of claim 1 produces a set of results. Thus, Bates et al. discloses a secondary*
18 *instance of the method of claim 1, as the word “set” dictates more than a singular*
19 *occurrence of the method of claim 1.*

20 *performing antivirus processing upon the computer content (Bates et al., col. 9,*
21 *lines 62-66). Bates et al. discloses the processing of computer content for the likelihood*
22 *of existing viruses.*

1
2 Regarding claim 12, it is rejected, at least, for the same reasons as claim 1, and
3 furthermore because Bates et al. discloses:
4 *an access control console, for entering a first computer virus status mode in*
5 *response to receiving a computer virus outbreak report indicating a virus attack threat to*
6 *a computer network and for recovering a preselected virus access control time*
7 *corresponding to said virus status mode* (Bates et al., fig. 1, elem. 33; fig. 7);
8 *an anti-virus module, coupled to the access control console, configured to*
9 *compute a virus alert time based on the virus access control time and to compare a time*
10 *stamp of a target computer content with the virus alert time prior to execution of the*
11 *target computer content* (Bates et al., fig. 1, elem. 30; see rejections of claims 1 and 2).
12 *and wherein the anti-virus module is further configured to determine the*
13 *executability of the computer content in response to comparing the time stamp of the*
14 *target computer content with the virus alert time* (Bates et al., col. 9, line 56 – col. 10,
15 line 8; col. 11, lines 12-24). Bates et al. discloses that in response to a comparison, a
16 determination of computer content executability is performed. Thus Bates discloses
17 *content executability determination*, comprising an *anti-virus module*, used to determine
18 the trustworthiness (“executability”) of content.

19
20 Regarding claim 13, Bates et al. discloses:
21 *a memory module for storing time stamps of the plurality of computer contents*
22 (Bates et al., fig. 1, elem. 46);

1 *and an access control module, coupled to the access control console and to the*
2 *memory module, for computing the virus alert time and for comparing the time stamp of*
3 *each target computer content with the virus alert time (Bates et al., fig. 1, elem. 42; see*
4 *rejections of claims 1 and 2).*

5
6 Regarding claim 14, Bates et al. discloses:

7 *a computer virus processing module, coupled to the access control module, for*
8 *further processing a target computer content in order to determine the executability of*
9 *the target computer content (Bates et al., fig. 1, elem. 44).*

10
11 Regarding claim 15, Bates et al. discloses:

12 *wherein the memory module stores a value representing each of the computer*
13 *contents (Bates et al., col. 12, lines 52-65).*

14
15 Regarding claim 16, Bates et al. discloses:

16 *wherein the access control module is configured to determine the presence of*
17 *the value in the memory module as representing a target computer content (Bates et al.,*
18 *fig. 3).*

19
20 Regarding claim 17, Bates et al. discloses:

21 *wherein the value is a hash value (Bates et al., col. 12, lines 52-65).*
22

1 Regarding claim 20, it is rejected, at least, for the same reasons as claim 1, and
2 furthermore because Bates et al. discloses:

3 *creating a list of time-stamped executable computer contents (Bates et al., fig. 3,*
4 *elem. 92).*

5 *entering a virus alert mode in response to a virus outbreak report indicating a*
6 *virus attack threat to a computer network (Bates et al., fig. 2; col. 1, lines 13-52).*

7 *responsive to the virus alert mode, entering an access control message for*
8 *specifying an access control rule for blocking the execution of suspicious or susceptible*
9 *computer contents that are time-stamped not before computed virus alert time, the*
10 *access control message including a first control parameter for computing the virus alert*
11 *time (Bates et al., fig. 2; fig. 7; see rejections of claims 1 and 2).*

12 *receiving a request to execute a target computer content; and determining the*
13 *executability of the target computer content based on the access control rule in the*
14 *access control message (Bates et al., fig. 2).*

15
16 Regarding claim 21, Bates et al. discloses:

17 *applying anti-virus operation upon each executable computer content, storing a*
18 *hash value of each executable computer content in the list; and inserting a time stamp*
19 *corresponding to the moment of storing the hash value of the executable computer*
20 *content (Bates et al., fig. 3).*

21
22 Regarding claim 22, Bates et al. discloses:

1 *receiving the access control message; automatically converting the first control*
2 *parameter into the virus alert time; comparing the time stamp of the target computer*
3 *content in the list with the virus alert time; and determining the executability of the target*
4 *computer content based on the result of the comparing step (Bates et al., fig. 2, fig. 3,*
5 *fig. 7; see rejections of claims 1 and 2).*

6
7 Regarding claim 23, Bates et al. discloses:
8 applying an anti-virus operation upon the target computer content (Bates et al.,
9 fig. 3).

10
11 Regarding claim 24, Bates et al. discloses:
12 *a second control parameter for specifying types of computer contents that should*
13 *be subject to the access control rule (Bates et al., col. 9, line 62 – col. 10, line 28);*
14 *a third control parameter for specifying an expiration time for the access control*
15 *rule (Bates et al., fig. 7, elem. 217);*
16 *and a fourth control parameter for identifying the access control message (Bates*
17 *et al., fig. 2).*

18
19 Regarding claim 25, Bates et al. discloses:
20 *determining validity of the access control message based on the third control*
21 *parameter (Bates et al., fig. 3);*

22

1 Regarding claim 26, Bates et al. discloses:

2 *determining executability of the target computer content based on the second*
3 *control parameter* (Bates et al., col. 9, line 62 – col. 10, line 28);

4
5 Regarding claims 27 and 28, they are rejected for the same reasons as claims 20
6 and 22, and further because Bates et al. discloses the usage of their system in a
7 network of communicating computers (Bates et al., fig. 1). Communications to a user
8 can be blocked when computer content is deemed to be untrustworthy (Bates et al., col.
9 3, lines 24-27, col. 14, line 6 – col. 15, line 8).

10
11 Regarding claim 29, Bates et al. discloses:

12 wherein the data communication is blocked when the target computer content is
13 time-stamped not before the virus alert time (Bates et al., fig. 3; fig 7).

14
15 Regarding claim 30, it is rejected, at least, for the same reasons as claim 1, and
16 furthermore because Bates et al. discloses:

17 *a firewall module monitoring data communications initiated by a target computer*
18 *content and sending a request to examine the data communications* (Bates et al., fig. 1,
19 elems.20, 30, 50). Bates et al. discloses that the system is useful in a network and it is
20 capable of filtering trustworthy and untrustworthy computer content – thus, acting as a
21 firewall module.

1 *an access control console, for generating an access control message specifying*
2 *an access control rule for blocking data communications of the target computer content*
3 *when said content is time-stamped not before a virus alert time, the access control*
4 *message including a first control parameter for computing the virus alert time in*
5 *response to a virus outbreak report indicating a virus attack threat to a computer*
6 *network (Bates et al., fig. 7; fig. 2);*

7 *and an access control module, coupled to the access control console and the*
8 *firewall module, configured to receive the access control message and a request from*
9 *the firewall module, and to compute the virus alert time based on the virus access*
10 *control time and to determine whether the data communication should be blocked*
11 *based on the access control rule (Bates et al., fig. 1, elem. 44, see rejections of claims 1*
12 *and 2).*

13
14 Regarding claim 31, it is a program and computer medium claim implementing
15 the method claim 1, and it is rejected for the same reasons (see also, Bates et al., fig.
16 1).

17
18 Regarding claim 32, it is rejected, at least, for the same reasons as claim 1, and
19 furthermore because Bates et al. discloses:

20 *means for entering a computer virus status mode in response to a virus outbreak*
21 *report indicating a virus attack threat to a computer network and for automatically*
22 *recovering a preselected virus access control time (Bates et al., fig. 7);*

1 *coupled to the entering and recovering means, means for computing a virus alert*
2 *time based on the virus access control time (Bates et al., fig. 1, elems. 31, 42, 44),*
3 *and coupled to the computing virus alert time means, means for comparing a*
4 *time stamp of a target computer content with the virus alert time prior to execution of the*
5 *computer content (Bates et al., fig. 1, elem. 42),*
6 *and for determining the executability of the computer content in response to*
7 *comparing the time stamp of the target computer content with the virus alert time (Bates*
8 *et al., col. 9, line 56 – col. 10, line 8; col. 11, lines 12-24). Bates et al. discloses a*
9 *determination of computer content executability is performed for determining the*
10 *trustworthiness ("executability") of content.*

11
12 Regarding claim 33, it is rejected, at least, for the same reasons as claim 1, and
13 furthermore because Bates et al. discloses:

14 *means for storing time-stamped executable computer contents (Bates et al., fig.*
15 *1, elem. 46);*

16 *a firewall means for monitoring data communications occurring to the executable*
17 *computer contents (Bates et al., fig. 1, elems. 44, 29, 52).*

18 *means for entering a computer virus status mode in response to a virus outbreak*
19 *report indicating a virus attack threat to a computer network and for automatically*
20 *recovering a preselected virus access control time (Bates et al., fig. 7);*

21 *coupled to the entering and recovering means, means for computing a virus alert*
22 *time based on the virus access control time (Bates et al., fig. 1, elems. 31, 42, 44).*

1 *and coupled to the computing virus alert time means, the storing means, and the*
2 *firewall means, means for comparing a time stamp of an executable computer content*
3 *with the virus alert time to determine whether the data communication occurring to the*
4 *executable computer content should be blocked (Bates et al., fig. 1, elem. 44, 42).*

5
6 ***Claim Rejections - 35 USC § 103***

7
8 The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all
9 obviousness rejections set forth in this Office action:

10 (a) A patent may not be obtained though the invention is not identically disclosed or described as set
11 forth in section 102 of this title, if the differences between the subject matter sought to be patented and
12 the prior art are such that the subject matter as a whole would have been obvious at the time the
13 invention was made to a person having ordinary skill in the art to which said subject matter pertains.
14 Patentability shall not be negated by the manner in which the invention was made.

15
16 **Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over**
17 **Bates et al., U.S. Patent 6,721,721 B1 in view of Symantec, "Norton AntiVirus**
18 **Corporate Edition".**

19
20 Regarding claim 11, Bates et al. discloses that viruses can be found in email
21 attachments, and that it is well known in the art for antivirus programs to have the
22 capability for performing antivirus processing on emails and email attachments (Bates et
23 al., col. 1, lines 35-63). Bates et al. discloses an antivirus program or module for
24 performing such antivirus processing (Bates et al., fig. 1, elems. 44, 52). Bates et al.,
25 however, does not disclose the details of the antivirus processing for emails and email
26 attachments. Specifically, Bates et al. does not disclose that the antivirus program or

1 module removes the computer content from the E-mail body, and denies execution of
2 the computer content.

3 Symantec discloses an antivirus program and the details of how the program
4 performs antivirus processing upon an email with an attachment. Symantec discloses
5 that the antivirus program scans content attached to an email body and removes such
6 content if it is found to contain a virus, thus, denying execution of the content
7 (Symantec, page 15, par. 2; page 22, "Managing Realtime Protection").

8 It would have been obvious for one of ordinary skill in the art to combine the
9 details disclosed by Symantec for the antivirus processing of emails with the system of
10 Bates et al. because the system of Bates et al. discloses an antivirus program capable
11 of performing antivirus processing for processing of emails.

12
13
14 ***Response to Arguments***

15
16 Applicant's arguments filed 9/1/06 have been fully considered but they are not
17 persuasive.

18
19 Applicants argue primarily that:

20
21 (i) *While Bates discloses the above virus criteria, Bates is completely silent as to*
22 *comparing or assessing a time stamp of a returned search result file against a*
23 *computed virus alert time. (Remarks, pg. 15)*

1

2 First, for purpose of clarity, the examiner respectfully notes, regarding the
3 applicant's argument that the references fail to show certain features of applicant's
4 invention, that the features upon which applicant relies (i.e., *a time stamp of a returned*
5 *search result file*) are not recited in the rejected claim(s). Although the claims are
6 interpreted in light of the specification, limitations from the specification are not read into
7 the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

8 Second, the examiner notes that it would appear helpful within the course of
9 prosecution to review the argued claim language in light of the applicant's own
10 disclosure.

11 Specifically, regarding the claim limitation - "*entering a first computer virus status*
12 *mode in response to a first computer virus outbreak report indicating a virus attack*
13 *threat to a computer network*", it appears the applicant discloses that this may comprise,
14 for example, when a person (i.e. administrator) reviews information (i.e. such as from a
15 web site or the news media) [par. 67]. Subsequently, a person may try to derive various
16 pieces of information from which he/she uses to make a decision regarding protection
17 criteria ("access control time" - essentially "a relative time stamp" or a particular "period
18 of time, e.g. 3 days"). The "access control time" is entered by the person into the
19 system [par. 69]. Regarding the claim limitations - "*computing a first computer virus alert*
20 *time...*", and "*comparing a time stamp of a computer content with the first computer*
21 *virus alert time*", it appears that the applicant discloses this may comprise the computer
22 translating the information entered by the user - the "relative time stamp" or "particular

1 period of time" (e.g. "3 days") – into a necessary format (e.g. a timestamp) such that it
2 may be compared to another timestamp belonging to computer content [par. 69].

3 In view of the claim limitations, the examiner maintains the claim rejections of
4 record and find's the applicant's arguments to be unpersuasive. Bates anticipates, at
5 least, the claim limitations, wherein, as even admitted by the applicant, Bates discloses
6 the user entering a relative time stamp or specifying a virus criterion [Applicant's
7 Remarks, pg. 16]. Furthermore, Bates discloses that the information entered by the
8 user is computed or translated into appropriate data ("virus alert time") for comparison
9 to a timestamp of computer content (see rejection of claim 1).

11
12 ***Conclusion***

13
14 The prior art made of record and not relied upon is considered pertinent to
15 applicant's disclosure:

16
17 ***See Notice of References Cited***

18
19 **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time
20 policy as set forth in 37 CFR 1.136(a).

21 A shortened statutory period for reply to this final action is set to expire THREE
22 MONTHS from the mailing date of this action. In the event a first reply is filed within

1 TWO MONTHS of the mailing date of this final action and the advisory action is not
2 mailed until after the end of the THREE-MONTH shortened statutory period, then the
3 shortened statutory period will expire on the date the advisory action is mailed, and any
4 extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of
5 the advisory action. In no event, however, will the statutory period for reply expire later
6 than SIX MONTHS from the mailing date of this final action.

7
8 Any inquiry concerning this communication or earlier communications from the
9 examiner should be directed to Jeffery Williams whose telephone number is (571) 272-
10 7965. The examiner can normally be reached on 8:30-5:00.

11 If attempts to reach the examiner by telephone are unsuccessful, the examiner's
12 supervisor, Emmanuel Moise can be reached on (571) 272-3865. The fax phone
13 number for the organization where this application or proceeding is assigned is (703)
14 872-9306.

15 Information regarding the status of an application may be obtained from the
16 Patent Application Information Retrieval (PAIR) system. Status information for
17 published applications may be obtained from either Private PAIR or Public PAIR.
18 Status information for unpublished applications is available through Private PAIR only.
19 For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should
20 you have questions on access to the Private PAIR system, contact the Electronic
21 Business Center (EBC) at 866-217-9197 (toll-free).
